ERRATA

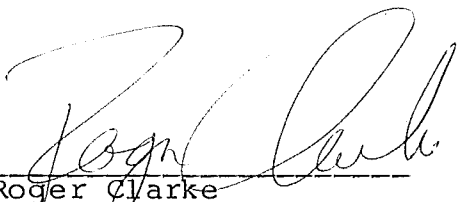

SUPPLEMENTARY REVIEW

THE REGIONAL MUNICIPALITY OF HALTON

ADDITIONAL INFORMATION
(TO BE INCLUDED AS PAGE 21B AND 21C)
APRIL 1987

Ministry of Natural Resources

"The Ministry has no additional concerns relating to the redefinition of the required site capacity and the site plan area boundaries as defined in the Region of Halton letter of November 25, 1986."

Response Document

"On page 18 of the Response Document the Municipality has agreed to comply with the requirements of this legislation [Pits and Quarries Control Act] (as it pertains to a licence shale pit on Site F), to our satisfaction."

The Ministry suggests "that the Region [of Halton] should make every possible effort to keeping open the option of future extraction and maintain the existing pit licence. In our opinion, this would allow for the conservation of the resource [shale] in the event that a willing buyer appears or excess quantities of shale are produced as part of the landfill operation".

"On page 18 and 20 the Region makes a commitment to a process of continued consultation with our Ministry, particularly in relation to wooded areas on Site F and Site D. This is satisfactory to this Ministry, and in this regard, detailed comments on the Halton Region Landfill Technical Study will be forwarded to the Municipality in the near future."

The Ministry recommends that the following conditions be attached to the Environmental Assessment:

- "1) That the Region of Halton, or its designate, maintain the licence to extract shale on Site F, should Site F be selected as the landfill, in consultation with the District Manager, Ministry of Natural Resources, Cambridge.
- 2) That, if excess shale is generated as part of the operation of Site F the Region of Halton consider its utilization for the manufacture of bricks or related products.
- 3) That, Halton Region encourage and facilitate, in consultation with the District Manager, Ministry of Natural Resources, Cambridge District, the direct extraction of shale from those areas of the waste disposal site (if Site F is chosen) which are not actively being used for waste disposal operations.
- 4) That the Region of Halton make every reasonable effort to inform producers of bricks or related products of the availability of shale from Site F."

Previous comments of the Ministry of Natural Resources can be found on Page 52 of the Review (February, 1986).
