GLU AT A GLANCE

Great Lakes United provides the organizational base for groups and individuals to become involved in a cooperative manner, to learn from each other's experience and to understand the inter-relationship of environmental hazards to the ecosystems as a whole. GLU has been involved in issues such as the U.S. - Canada Great Lakes Water Quality Agreement, Remedial Action Plans, winter navigation and potential water diversions out of the Great Lakes basin. Through our unified efforts, GLU has provided the catalyst for Great Lakes citizens to be involved in the decision-making process. Through this joint effort, the philosophy of an ecosystem approach to environmental problem-solving can be realized in public policy development. The results are increased environmental, social, and economic improvements to the Great Lakes-St. Lawrence River ecosystem – a fragile and treasured system that needs protection and conservation.

We hope you join us at this year's 10th Annual Meeting to further develop joint policies and action plans aimed at the enhancement of the Great Lakes-St. Lawrence River ecosystems and to celebrate our shared successes.
