**Remarks to the Standing Committee on General Governance
Re: Bill 167 An Act to promote reductions in the use and creation
of toxic substances and to amend other Acts**

Good afternoon Chairman and Committee Members, thank you for the opportunity to address you on this critical piece of legislation. Bill 167 has the potential to substantially reduce the exposures to harmful toxic substances that Ontario facilities release in record levels to the air and water sheds of North America. In 2006 Ontario facilities reported releases of 879,246,698 kilograms of toxics to all media. Constitutionally Ontario has the right to design its own solutions to address this made in Ontario problem. We see no conflict with federal chemical management programs.

The Canadian Environmental Law Association (CELA), a public interest legal aid clinic with a law reform mandate, has worked since 1970 to reduce toxic use and influence a shift to a precautionary approach toward harmful substances. We congratulate the Premier and all members of Parliament for recognising that this is first and foremost a health issue and we are here to prevent avoidable diseases caused by chronic exposures to these substances in workplaces and the environment. CELA worked closely with the Take Charge of Toxics Coalition and our contribution to their Campaign was the drafting in August 2008 of a Model Toxic Use Reduction Act for Ontario setting out our suggestions for the best model for fast effective action. Our remarks here to day will touch on differences in our Act and Bill 167 and will briefly list matters that need to be included in the Act in the form of amendments, and other components necessary for successful Ontario toxic reduction. Many of the recommendations made by the government's Expert Panel concur with ours. We have provided you with our report *Our Toxic-Free Future: an Action Plan and Model Toxics Use Reduction Law for Ontario* as well as our other submissions.

The teeth of Bill 167 will lie in its regulations, which are not yet public. Nonetheless, CELA assumes that, with some exceptions, the ultimate shape the Bill 167 regime (Act, regulations, and related programs) will take is as described in the MOE August 2008 *Discussion Paper* and in the April 7, 2009 *Backgrounder* setting out Next Steps and the proposed content of the regulations.

Matters that should be included in Bill 167 in amendments are:

1. Targets The legislation should include provincial toxic use reduction targets to set out clear objectives and to measure progress. We recommend 50% within 5 years.

2. Fees and Fund A successful program requires a financial engine. The success of the Massachusetts TUR program has been enhanced by fees on the use of toxic substances. These fees imposed on the regulated community financed the programs and institutions needed to achieve the purpose of their Act. Other efforts in Maine and Oregon that lacked a funding mechanism have not been as successful.

3. Substitution of Safer Alternatives The legislation should include requirements for safer alternatives. This will ensure Ontario industry is competitive and in compliance with European Union regulations.

4. Conflict with Municipal By-laws Bill 167 is silent on the issue of whether and, if so, how provincial legislation will address potential conflicts with municipal by-laws that might purport to impose greater toxics use reduction or other requirements on industrial facilities than that proposed under the new provincial law. Explicit language should be put in the Act to avoid ambiguity. The CELA model bill provides this language.

5. Establishment of a Toxic Use Reduction Institute Establishment of an Institute is central to the success of toxic reduction. Training toxic reduction planners, acting as a resource for best practices and for information for the public has led the Toxic Use Reduction Institute in Massachusetts to become the lead global center of excellence in toxic reduction. Creation of such an institution also would help to protect MOE

from a defence of officially induced error in the event of the need to prosecute under the Act, since the actions and advice of the institute would not be that of the MOE.

6. Employee Assistance Programs Bill 167 is silent on programs needed for employees that could be impacted by this Bill.

7. Technical and Financial Assistance Programs for Small Businesses Bill 167 is silent on technical and financial assistance programs for small facilities and businesses. Such assistance should be made available even if small businesses are not subject to the requirements of Bill 167.

8. Enhanced Public Participation Further provisions are needed to provide for adequate public access to information. A public right to apply for review of pollution prevention and substitution plans under the EBR, and a public right of action to enforce provisions of Bill 167.

Other matters that require improvement in Bill 167

1. The purpose of the Bill should include the precautionary principle and substitution of safer substances.
2. The Bill needs to cover all sectors that meet the Legislative thresholds.
3. The Minister of the Environment should lower thresholds in the Bill to capture small and medium sized facilities and particularly for carcinogens, reproductive toxins and toxins that are bioaccumulative and persistent.
4. The application of Bill 167 to consumer products should be clarified in regard to bans, restrictions, labelling and warnings.

In conclusion we urge you to look to our Model Law for ways CELA has outlined to improve Bill 167 and consider the advice of the Minister's Toxic Reduction Scientific Expert Panel. In our September 2008 submission we

stated:

“Given that Ontario is one of the top dischargers of toxics in North America and the number one discharger in Canada, CELA has some serious reservations about what the provincial proposal is silent or ambiguous about, as well as what appears to be aspects of the initiative that are too narrow, limited, or will be implemented too slowly.”

These concerns remain today.

Prepared by CELA Counsel Joe Castrilli and Researchers Sarah Miller and Anne Wordsworth

STANDING COMMITTEE ON GENERAL GOVERNMENT

Wednesday, May 13, 2009

Committee Room 228

AGENDA

Bill 167, An Act to promote reductions in the use and creation of toxic substances and to amend other Acts

- 4:00 p.m. Canadian Cancer Society, Ontario Division**
Irene Gallagher Jones, Senior Manager, Public Issues
- 4:15 p.m. Environmental Defence**
Janelle Witzel, Toxic Nation Coordinator
- 4:30 p.m. Canadian Cosmetic, Toiletry and Fragrance Association**
Darren Praznik, President and CEO
- 4:45 p.m. Sarnia Lampton Environmental Association**
Dean Edwardson, General Manager
- 5:00 p.m. Canadian Environmental Law Association**
Sarah Miller, Coordinator and Researcher
Joseph Castrilli, Counsel
- 5:15 p.m. Registered Nurses Association of Ontario**
Doris Grinspun, Executive Director
- 5:30 p.m. Canadian Petroleum Products Institute**
Eric Bristow, Director, Government Stakeholder Relations for Ontario
- 5:45 p.m. Ontario Public Health Association**
Carol Pimmings, President
Helen Doyle, Environmental Specialist
Connie Utrecht, Executive Director

The Canadian Environmental Protection Act (CEPA), the National Pollutant Release Inventory (NPRI) and Ontario's Bill 167 Toxic Reduction Act ~ Potential Lists of Substances

The Canadian Chemical Producers Association (CCPA) has suggested Ontario should be basing their program on the Canadian Environmental Protection Act (CEPA) and that the Ontario government has no science-based process for adding to the list. Other assertions CCPA has made are:

CEPA is "science based" list of chemicals based on risk. Globally, we are moving away from risk assessment because it does not take into account cumulative and interactive effects. Regulators are looking at hazard and hazardous effects and exposures. The Ontario list represents hazardous chemicals. Risk assessment is an industry strategy that ties people up in knots for years trying to prove something is not good for us. It puts the onus on government and the public to prove the "risk" of hazardous chemicals, while a precautionary approach assumes that we should reduce the quantities of hazardous substances all mixed together in our environment because we can never figure out all of their possible consequences.

NPRI is "emissions-based" not "risk based". That's the point -- TRA is about toxics use reduction, and not about estimating risk. It incorporates a precautionary point of view that less toxics mean less exposure and less environmental and health risk. It has been particularly useful in reducing exposures in workplaces. These have nothing to do with emissions and

everything to do with health. The Government's Expert Panel which included experts on CEPA and NPRI endorsed taking a hazard approach.

NPRI substances are not toxic - they have not had an assessment to see if they pose a risk. All NPRI substances were chosen based on their polluting or toxic effects. That's why the US equivalent is called the Toxics Release Inventory. Just because they haven't been assessed for risk doesn't mean they aren't toxic. Some are toxic and some are air and water pollutants with health and environmental effects. All are considered problematic and good targets for reduction.

Using NPRI would cause duplication and cost more money. The opposite is true. Using NPRI avoids duplication because industry already reports under this program and is consistent with the model used in the states of New Jersey and Massachusetts and in Eugene, Oregon. All base their reporting and toxics use reduction efforts on TRI which is the American counterpart to NPRI. It allows us to see whether there are any reductions being made because we have a history of reporting.

Furthermore we support the Ontario approach to their list because:

- The CEPA list is not the Ontario list that would be required for a made-in-Ontario plan to address specific substances in use in the Province. Ontario has the constitutional authority to design its own list to address problems created within its borders.
- Here is a link to what has currently been put on the CEPA list.

http://www.ec.gc.ca/ceparegistry/subs_list/Toxicupdate.cfm

. This list currently covers only **85** substances. Many of these are not individual toxic chemicals but conglomerations in emissions. Bill 167, if it maintains the schedule set out in the Government Discussion Paper, will eventually cover **475** substances.

- The CEPA list does not cover or stress many of the carcinogens that our July 2007 report *Cancer and the Environment in Ontario: GAP Analysis on the Reduction of Carcinogens*. This report identified **202** carcinogens of concern in use and largely unregulated in Ontario. All three parties promised to act on this Report before the last election.
- The Government Discussion Paper set out to include these carcinogens in order to meet the original objective of Toxic Use Reduction announced by Premier McGuinty which was “to reduce the environmental causes of sickness in Ontario”
- Furthermore the Government Discussion paper and their Expert Panel has targeted other substances that are known to be neurotoxins, reproductive toxins and mutagens that are not currently reported under NPRI to eventually be covered by TRA.
- The CEPA program does not require pollution prevention planning on a facility by facility basis as the TRA does.

- CPPA members already report to NPRI and so Ontario's scheme first sets out to include all NPRI substances in the first 2 phases of their reporting. The only difference is that they will now have to report on use as well as emissions. Industry at the Hamilton Consultation on the Government Discussion Paper stated that they already track use data in order to arrive at the emissions data they currently report to NPRI.

*Prepared by CELA Researchers Sarah Miller and Anne Wordsworth
May 13, 2009*

STANDING COMMITTEE ON GENERAL GOVERNMENT**REPORT OF THE SUB-COMMITTEE**

Your Sub-committee met on Wednesday, May 6, 2009, to consider the method of proceeding on Bill 167, An Act to promote reductions in the use and creation of toxic substances and to amend other Acts, and recommends the following:

1. That the Committee meet in Toronto on Wednesday, May 13, 2009, and Monday, May 25, 2009, for the purpose of holding public hearings.
2. That the Committee Clerk, with the authorization of the Chair, post information regarding public hearings in the Ontario Edition of the Globe & Mail, the Toronto Star, and the Sarnia Observer for one day during the week of May 11, 2009.
3. That the Committee Clerk, with the authorization of the Chair, post information regarding public hearings on the Ontario Parliamentary channel and the Legislative Assembly website.
4. That interested parties who wish to be considered to make an oral presentation contact the Committee Clerk by 12:00 noon on Thursday, May 14, 2009.
5. That groups and individuals be offered 10 minutes for their presentation. This time is to be scheduled in 15 minutes increments to allow for questions from the Committee.
6. That witnesses be scheduled on a first come first serves basis for the May 13, 2009 hearing date.
7. That, in the event all remaining witnesses cannot be scheduled for the May 25, 2009 hearing date, the Committee Clerk provide the members of the Sub-committee with a list of requests to appear.
8. That the members of the Sub-committee prioritize and return the list of requests to appear by 12:00 noon on Tuesday, May 19, 2009, and that the Committee Clerk schedule witnesses based on those prioritized lists.
9. That the deadline for written submissions be 5:00 p.m. on Monday, May 25, 2009.
10. That the Research Officer provide the Committee with a summary of presentations.
11. That, for administrative purposes, proposed amendments be filed with the Committee Clerk by 12:00 noon on Thursday, May 28, 2009.
12. That the Committee meet for the purpose of clause-by-clause consideration of the Bill on Monday, June 1, 2009, and that each Party be offered an opportunity to make opening remarks.
13. That the Committee Clerk, in consultation with the Chair, be authorized prior to the adoption of the Report of the Sub-committee to commence making any preliminary arrangements necessary to facilitate the Committee's proceedings.
