16 septembre au 12 octobre 2013

Joint Review Panel

Dear Sir or Madam:

Re: OPG's Deep Geological Repository Project

This letter acknowledges my support for OPG's Deep Geological Repository Project for low and intermediate radioactive waste.

With 26 years experience in the Nuclear Industry, I feel that OPG is taking a responsible step to safely store low and intermediate radioactive waste. This waste is part of the normal operation of a Nuclear Generating Station. Some of the waste is currently compacted, incinerated and some stored above ground at the existing Bruce Site OPG Facilities. However, the Deep Geological storage provides a much more safe and permanent storage. The proposed site represents a seismically stable area, as well as low permeability rock formations. All shafts will be sealed. In my opinion, the Site workers and public will have more than ample protection from the low and intermediate radioactive waste when it is stored deep underground.

I highly recommend that the Joint Review Panel approve OPG's Deep Geological Repository Project for low and intermediate radioactive waste storage.

Sincerely yours

J.C. Woodrow
